

ELECTRONIC MEDIA AND BIM STRATEGY POLICY

T.F.Tull is committed to developing long term relationships with clients to foster a clear understanding of the changing needs of their business as we look to drive improvements in safety and efficiency into the diverse and demanding construction sector.

This commitment naturally extends into the use of new technologies to increase the availability of multi-platform information and the use of BIM in the industry.

T.F.Tull are committed to continuous investment in hardware, software and training to deliver, alongside our customers sector-leading BIM compliant information to support the developing strategies and requirements in the industry.

For our clients this commitment will mean:

- The on-going and continuous development of our component library to meet and exceed industry standards
- The availability via our resource of a library of technical data and multi-platform blocks to include AutoCAD
- Dedicated, experienced, trained and suitably equipped engineers embedded within our engineering team to advise, assist and create safe, cost effective solutions with information available across multiple platforms
